PDF LAB / 04

I have another identity.

The file you are reading is also a ZIP archive.

INTERPRETER 01 / PDF

A document.

This page is the public face. Your PDF reader follows cross-references to assemble the page you see.

INTERPRETER 02 / ZIP

An evidence bag.

Open the exact same bytes with an archive reader.
Inside: a message, a recipe and the construction source.

No attachment button. No second download.

Try: python3 -m zipfile -l 04-two-identities.pdf

Copy or rename it to .zip if your archive tool needs an extension.

The interesting question is which reader tolerates which boundaries.

Compatibility exhibit. Standards conformance is not claimed.
